

WHAT IS CLAIMED IS:

1           1.       A method for executing a statement to manipulate data stored in a data store  
2 connected to a computer, the method comprising:  
3           receiving the statement for a transaction, wherein the statement operates on one or  
4 more objects;  
5           generating a private catalog for recording information about the objects; and  
6           using the private catalog during the transaction to access the objects.

1           2.       The method of claim 1, wherein the private catalog comprises a private copy  
2 of an original catalog, wherein the original catalog comprises one or more original individual  
3 catalog tables.

1           3.       The method of claim 1, wherein the objects are private objects.

1           4.       The method of claim 1, wherein the objects are non-private objects.

1           5.       The method of claim 1, wherein the objects are user-defined objects.

1           6.       The method of claim 1, wherein the objects are system objects.

1           7.       The method of claim 1, wherein the private catalog comprises a temporary  
2 private catalog.

1           8.       The method of claim 7, wherein the temporary private catalog is deleted from  
2 the data store after a user-defined amount of time.

1           9.       The method of claim 7, wherein the temporary private catalog is deleted from  
2 the data store after an amount of time required by a system.

1           10.     The method of claim 7, wherein the temporary private catalog is deleted from  
2     the data store after a predetermined amount of time.

1           11.     The method of claim 7, wherein the temporary private catalog is deleted from  
2     the data store after the transaction no longer requires object data.

1           12.     The method of claim 7, wherein the temporary private catalog is deleted from  
2     the data store after the transaction executes.

1           13.     The method of claim 1, wherein the private catalog is used exclusively by  
2     the transaction.

1           14.     The method of claim 1, wherein the private catalog records only information  
2     about tables accessed by the transaction.

1           15.     The method of claim 1, further comprising accessing an additional object.

1           16.     The method of claim 15, wherein the private catalog records information  
2     about the additional object.

1           17.     The method of claim 1, further comprising populating the private catalog  
2     with an identification attribute.

1           18.     The method of claim 17, wherein the identification attribute comprises a  
2     description of the object used by the transaction.

1           19.     The method of claim 17, wherein the identification attribute comprises a  
2     definition of the object used by the transaction.

1           20.     The method of claim 1, wherein the statement comprises a data definition  
2     language statement.

1           21.     An apparatus for executing a statement to manipulate data, comprising:  
2           a computer having a data store connected thereto, wherein the data store stores data;  
3     and  
4           one or more computer programs, performed by the computer, for receiving the  
5     statement for a transaction, wherein the statement operates on one or more objects;  
6     generating a private catalog for recording information about the objects; and using the private  
7     catalog during the transaction to access the objects.

1           22.     The apparatus of claim 21, wherein the private catalog comprises a private  
2     copy of an original catalog, wherein the original catalog comprises one or more original  
3     individual catalog tables.

1           23.     The apparatus of claim 21, wherein the objects are private objects.

1           24.     The apparatus of claim 21, wherein the objects are non-private objects.

1           25.     The apparatus of claim 21, wherein the objects are user-defined objects.

1           26.     The apparatus of claim 21, wherein the objects are system objects.

1           27.     The apparatus of claim 21, wherein the private catalog comprises a temporary  
2     private catalog.

1           28.     The apparatus of claim 27, wherein the temporary private catalog is deleted  
2     from the data store after a user-defined amount of time.

1           29.     The apparatus of claim 27, wherein the temporary private catalog is deleted  
2     from the data store after an amount of time required by a system.

1           30.     The apparatus of claim 27, wherein the temporary private catalog is deleted  
2     from the data store after a predetermined amount of time.

1           31.     The apparatus of claim 27, wherein the temporary private catalog is deleted  
2     from the data store after the transaction no longer requires object data.

1           32.     The apparatus of claim 27, wherein the temporary private catalog is deleted  
2     from the data store after the transaction executes.

1           33.     The apparatus of claim 21, wherein the private catalog is used exclusively by  
2     the transaction.

1           34.     The apparatus of claim 21, wherein the private catalog records only  
2     information about tables accessed by the transaction.

1           35.     The apparatus of claim 21, further comprising accessing an additional object.

1           36.     The apparatus of claim 35, wherein the private catalog records information  
2     about the additional object.

1           37.     The apparatus of claim 21, further comprising populating the private catalog  
2     with an identification attribute.

1           38.     The apparatus of claim 37, wherein the identification attribute comprises a  
2     description of the object used by the transaction.

1           39.     The apparatus of claim 37, wherein the identification attribute comprises a  
2     definition of the object used by the transaction.

1           40.     The apparatus of claim 21, wherein the statement comprises a data definition  
2     language statement.

1           41.     An article of manufacture comprising a computer program carrier readable by  
2     a computer and embodying one or more instructions executable by the computer to perform  
3     method steps for executing a statement to manipulate data, comprising:  
4         receiving the statement for a transaction, wherein the statement operates on one or  
5     more objects;  
6         generating a private catalog for recording information about the objects; and  
7         using the private catalog during the transaction to access the objects.

1           42.     The article of manufacture of claim 41, wherein the private catalog comprises  
2     a private copy of an original catalog, wherein the original catalog comprises one or more  
3     original individual catalog tables.

1           43.     The article of manufacture of claim 41, wherein the objects are private objects.

1           44.     The article of manufacture of claim 41, wherein the objects are non-private  
2     objects.

1           45.     The article of manufacture of claim 41, wherein the objects are user-defined  
2     objects.

1           46.     The article of manufacture of claim 41, wherein the objects are system objects.

1           47.     The article of manufacture of claim 41, wherein the private catalog comprises  
2     a temporary private catalog.

1           49.     The article of manufacture of claim 47, wherein the temporary private catalog  
2     is deleted from the data store after an amount of time required by a system.

1           50.     The article of manufacture of claim 47, wherein the temporary private catalog  
2     is deleted from the data store after a predetermined amount of time.

51. The article of manufacture of claim 47, wherein the temporary private catalog is deleted from the data store after the transaction no longer requires object data.

1           52.     The article of manufacture of claim 47, wherein the temporary private catalog  
2     is deleted from the data store after the transaction executes.

1           53.     The article of manufacture of claim 41, wherein the private catalog is used  
2 exclusively by the transaction.

54. The article of manufacture of claim 41, wherein the private catalog records only information about tables accessed by the transaction.

1           55.     The article of manufacture of claim 41, further comprising accessing an  
2     additional object.

1            56.     The article of manufacture of claim 55, wherein the private catalog records  
2     information about the additional object.

57. The article of manufacture of claim 41, further comprising populating the private catalog with an identification attribute.

1           58.     The article of manufacture of claim 57, wherein the identification attribute  
2     comprises a description of the object used by the transaction.

1           59.     The article of manufacture of claim 57, wherein the identification attribute  
2     comprises a definition of the object used by the transaction.

1           60.     The article of manufacture of claim 41, wherein the statement comprises a  
2     data definition language statement.
